

Environmental policy

FD Traffic Management Limited recognises its responsibility to protect the environment and is committed to managing its activities in a way that minimises environmental impact. Although we are a small business, we aim to operate in a sustainable manner while continuing to provide safe and reliable traffic management services.

We will comply with all relevant environmental legislation and regulations and will work to prevent pollution wherever possible. Our activities will be carried out with care to reduce waste, limit emissions, and make efficient use of energy and materials. Wherever we can, we will reuse and recycle, and we will seek to work with suppliers who share our environmental values.

We understand that our vehicles and equipment have the potential to contribute to emissions and noise. For this reason, we will maintain our fleet properly, reduce unnecessary engine idling, and carry out operations in a way that reduces disruption to local communities. On every site we will take care to avoid damage to the local environment, and we will ensure that spill kits and emergency procedures are in place to deal with any fuel or oil leaks.

Responsibility for implementing this policy lies with the Managing Director, who will ensure that it is followed throughout the company. Every employee and subcontractor also has a duty to carry out their work in line with this policy and to report any environmental concerns.

This policy will be reviewed annually to make sure it remains relevant and effective for the size and nature of our business.

Signed: Thomas Green

Managing Director
